

Wood Bead Wreath Instructions

Materials

Materials in your kit:

- 10 wooden beads
- Twine
- Ribbon

Materials you will need:

- Scissors

Instructions

1. Thread all 10 beads onto your twine. (Tip: If this proves difficult because of the twine, try wrapping one end of the twine with tape to make it easier to thread the beads.)
2. After threading the beads, adjust them so that you have an even amount of twine on both ends.
3. Bring the two ends of twine together so you will see your wreath take shape.
4. Tie both ends of twine together so that your wreath will keep its shape. Be sure to double knot the twine.
5. Once your wreath has been tied, take either the blue or silver ribbon from the kit, and use it to tie a bow at the same area where you joined the twine ends together.
6. Adjust your bow to how you would like it to appear and your wreath is now complete.
