

Wood Spool Ornament Instructions

Materials

Materials in kit:

- 1-wood spool
- 1-jingle bell (assorted colors)
- Silver ribbon
- Blue ribbon
- Twine

Materials you need:

- Scissors
- Glue

Instructions

1. Measure and cut a length of blue ribbon that will wrap entirely around the center of the spool.
2. Using either the glue provided or some you have at home, you will put a line of glue along the center of the spool and lay one end of the ribbon on the glue. Allow to dry a bit.
3. Once the first line of glue is fairly dry, wrap the remaining ribbon around the center of the spool until the two ends meet or slightly overlap.

4. Glue the second end of ribbon to the spool. (Tip: You may need to hold the ribbon in place until the glue has dried a bit.)
5. Once your blue ribbon has been glued to the spool, take your silver ribbon and tie a bow around the center of the spool. Adjust your bow to the size you prefer and trim the tails.
6. Take your twine and fold it in half. Thread either end through the holes in your spool.
7. Adjust your twine so that you will have enough length to later knot the ends but also so you can hang the decoration.
8. Once your spool has been threaded, take your jingle bell and thread that on to one of the end pieces of twine.
9. Position the bell where you would like it to be on the twine and then knot the two ends of twine. This will prevent your bell and spool from moving.
10. To create a more secure ornament, you can also knot the twine at the top of the spool.
11. Once you have done these steps, your ornament should look similar to the one in the photo. Enjoy!
